JAVA

HTML

CSS

OOP

## PERSONAL PROJECTS

### WaterWorks

- Developed this whole system, In this system when we select addons there details and there respective picture shown below, this is dynamic it means if we change the addon the picture will also change as well. Also there is a button named as Send Quotation which asks for the email and after entering the email the whole quotation with pricing send to the respective email.

### Custom Translation for Translatepress Plugin

- This plugin is developed to manually override English strings with Arabic, Russian, or Chinese translations. While TranslatePress applies translations site-wide, this plugin allows page-specific string modifications to maintain proper context and syntax.

### Google Search Console - Bulk URL Removal Extension

- There was a security issue with a flood of malicious Japanese links in Google Search Console from the previous developer. To act quickly, I modified a bulk URL removal tool, bypassing the key requirement by accepting any input in the license field, and used its CSV upload to remove all malicious URLs in one swift operation.

### Dynamite Accessories

- Pixel Perfect Websites created from figma to wordpress. 100% Responsive and User friendly.

### AirApps

- Pixel Perfect Websites created from figma to wordpress. 100% Responsive and User friendly.
